Handwarmer Installation Guide

- 1) Install power harness to the positive terminal on one battery and the negative terminal on the other battery at the back of the two batteries with the harness going to the power module. See Picture 1A below.
- 2) Now you will want to install power switch module. This can be placed on top of one of the batteries or on the plate holding the fans and power module. Be sure to check for clearance for the seating before attaching Velcro. See Pictures 2A & B below.
- 3) Plug power harness into power switch module. This will be the plugs labeled IN you will also want plug heater cable in using the two plugs labeled OUT. This cable will go to the heater box.
- 4) Next install hand warmer support plate using the longer bolts supplied in kit. First remove the two 10-32 bolts holding the joystick to the joystick mount and then place support plate under mount then install longer bolts through plate and mount into joystick. See Picture 4A below.
- 5) Install heater box as shown in photos. See Picture 5A below.
- 6) Now you can plug cable into heater box and tie up cable so that it does not hang down or out so as to not catch on anything.
- 7) Your new heater has a remote power switch using some of the Velcro in the kit attach in your desired place. See Picture 7A below.
